

BUILD A CRAMP KIT - ADJUSTABLE, FABRICATED

Extremely versatile and practical tool for the tradesman who needs variable length clamping capability quickly. The cramp can be used with rectangular steel tubes or timber battens with widths ranging from 25mm - 50mm, with minimum height of 50mm. Infinite adjustments are possible by drilling 10mm diameter holes for the sliding jaw pin. Robust construction, extra length and thickness screw - throw it in the wagon, ute or tool box and have the ability to build a cramp to any length at any time. Australian designed and made.
